Set up Claude in 15 minutes

This one is for you. Follow these 6 steps, then hand the second PDF to Claude and it onboards you the rest of the way.

Good to know: it uses your own number

No second SIM or new number needed. Claude works through **WhatsApp Web linked to your own WhatsApp** and messages the learner (and parent) from your number.

A quick note on WhatsApp

WhatsApp discourages bulk or spammy automation, so this setup is deliberately gentle. It works like a tutor who checks their phone now and then:

- **It only replies.** Claude answers when your student writes, plus the weekly report you agree to. It never messages people out of the blue.
- **It checks every 2–3 hours** when things are quiet, and more often only while a conversation is active. Never faster than every 5 minutes.
- **One or two chats, max ~20 messages a day**, with people who know they're talking to an AI helper.

There's a small risk that WhatsApp flags any automation as spam, but at this pace (one number, at most ~20 messages a day) it's low. I've been running this setup every day for **about two weeks**, and not just for this: I use the same approach for several other things too. Keep it personal and small like this and you're using it the way it's meant to be used.

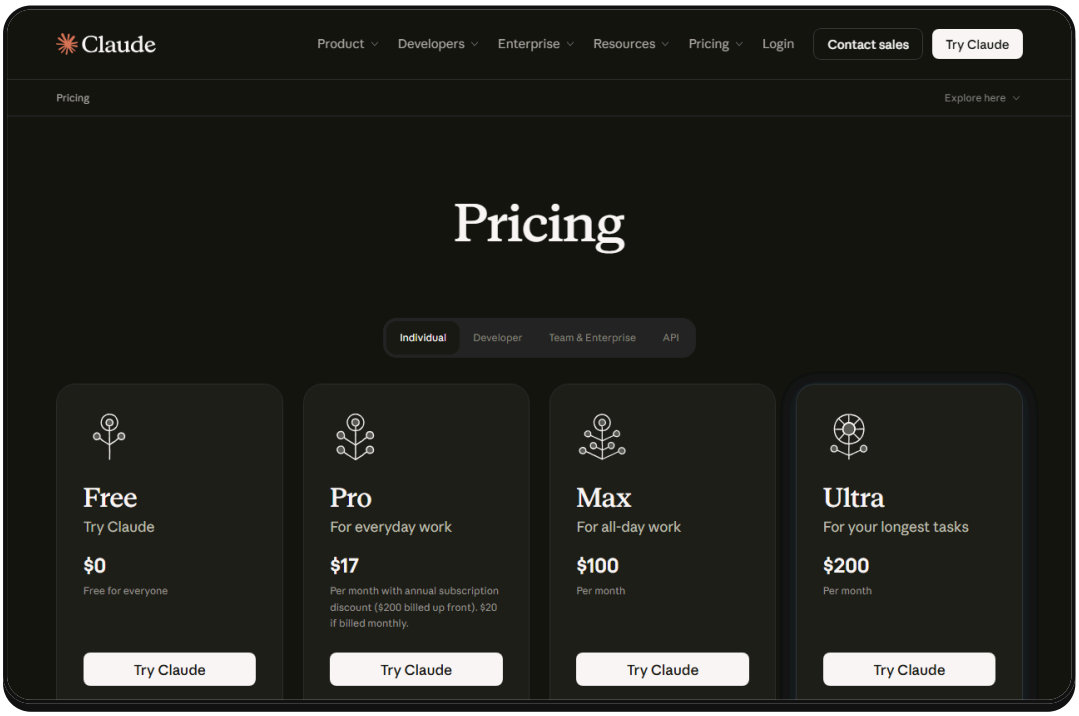

You need

A Windows or Mac laptop that can stay on, an email address, a payment card for the Claude subscription, and the file **2-Give-This-To-Claude.pdf** (Part 2).

1 Subscribe to Claude Pro

1. Go to claude.ai and sign up with your email (or Google account).
2. Open **Settings > Billing** (or click **Upgrade**) and choose **Pro**. Max works too, but Pro is enough to start.
3. Enter your payment details yourself and confirm.

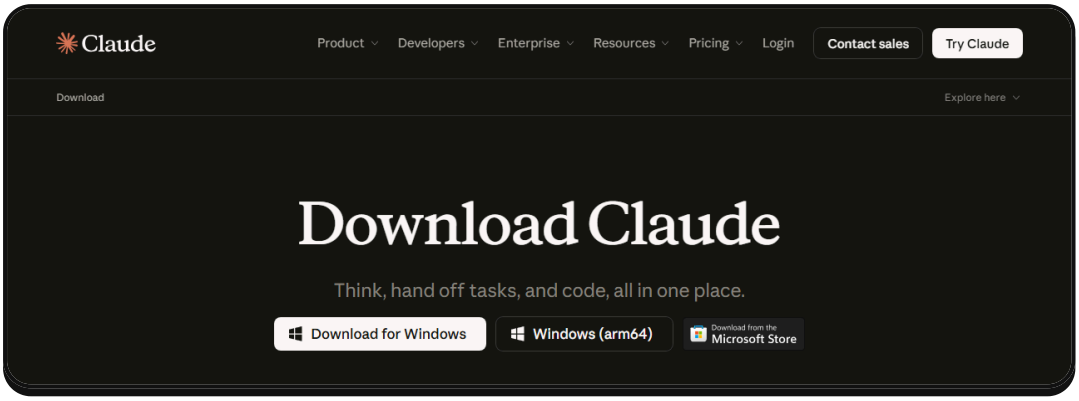

Claude Code (the part that can work on your laptop) needs a paid plan, so this step comes first.

claude.com/pricing: choose **Pro**, or Max if you'll use it heavily. Prices as shown in Nov 2026.

2 Download the Claude desktop app

1. Go to **claude.com/download**.
2. Pick **Windows** or **macOS** and run the installer.
   - Windows: open the downloaded file and follow the prompts.
   - Mac: open the .dmg and drag Claude into Applications.

claude.com/download: the page picks your system. Click the big Download button.

4. Also install the **Claude** app on your phone (App Store / Google Play). You'll use it later to control things from anywhere.

3 Open the app and sign in

1. Open Claude on the laptop and sign in with the same account you subscribed with.
2. Sign in on the phone app with the same account too.

4 Pick a folder and put the PDF in it

1. Use any folder you like. *Optional:* make a new one, for example **Mentor** on your Desktop, so everything stays in one place.
2. Copy **2-Give-This-To-Claude.pdf** into that folder.

Everything Claude creates for your mentor (rules, student files, images) will live in this folder.

5 Open Code in the desktop app

1. In the Claude desktop app, switch to the **Code** tab.
2. Choose the folder to work in: the one from step 4.
3. When Claude asks for permission to read or create files in that folder, allow it.

6 Drop the PDF in and start onboarding

1. **Name the session "Study Mentor".** Type `/rename Study Mentor` (or rename it from the session list in the sidebar). This is the session that will run your mentor, so you can spot it straight away in the Claude app on your phone.
2. **Switch to Opus 5.5 first.** Pick it in the model menu at the bottom of the message box, or type `/model` and choose Opus. Onboarding is the most important conversation, so give it the strongest model. You'll switch to Sonnet 5.5 for daily running later, and Claude will remind you.
3. Drag the **2-Give-This-To-Claude** PDF from that folder onto the message box (or attach it with the paperclip).
4. Type this and press Enter:

   ```
   Read this setup guide and onboard me.
   ```

5. Claude asks whether you're setup A or B, then walks you through the rest one step at a time: connecting your phone, Chrome, WhatsApp Web, and starting the mentor.
6. Claude will ask your permission to install two animation tools, **Remotion** and **HyperFrames**. Say yes and approve the prompt. If your computer blocks it, Claude gives you a few commands to paste into a terminal yourself.
7. Before it starts, Claude reads its rules back to you to confirm. You can change them any time: just tell Claude in plain words, and it checks with you again every week.

> **🏁 Your first milestone**
>
> Claude guides you to **Milestone 1: send a WhatsApp message from your phone**, through the remote Claude session on your laptop. When that message arrives, the hard part is done. After that, Claude sets the rules with you and installs the animation tools (Remotion and HyperFrames). **Milestone 2:** Claude makes a short animation video on a topic the learner chooses from their own subjects, and asks for feedback. Then it starts the mentor.

> **Which model should run the conversations?**
>
> - **Sonnet 5.5 (recommended default):** fast, warm, and strong at explaining. It uses less of your Pro limits, which matters because the mentor checks WhatsApp all day.
> - **Opus 5.5:** the most capable. Use it for onboarding, building the weekly report, or a hard multi-step problem. On Pro it uses limits faster, so switch back afterwards (or get Max if you want Opus all the time).
> - **Haiku 5.5:** not recommended for teaching. Too light for careful explanations.
>
> Pick the model from the model menu in the Code tab, or type `/model`. Claude can also switch for you: "use Opus for this one, then go back to Sonnet".

Setup A or B?

A: one learner, and you're the parent/mentor. Claude chats with the learner **from your WhatsApp number**, and you get the weekly reports in the Claude app.
B: you run Claude for a learner and their parent. Claude chats with both **from your WhatsApp number**, and the parent gets weekly reports there.

Before you start

- **There is no special "Claude number".** Claude sends messages from **your own WhatsApp number**, the one you link to WhatsApp Web on the laptop. The learner (and parent) see the messages coming from you, signed "(Claude)".
- Because it's your real number, keep it to **1 or 2 chats**, and checks **no faster than every 5 minutes**. Heavy automated messaging can get a number banned. Claude only opens the chats you list; all your other chats stay off-limits. It never sends stickers or GIFs.
- You type passwords, payment details and QR scans yourself. Never paste them to Claude.
- The laptop and the Claude app must **stay on** for the mentor to keep working.

Stuck?

- **No Code tab:** update the app (Help or the menu, then Check for updates) and confirm your plan is Pro or Max.
- **Claude can't see the PDF:** make sure you picked the folder from step 4 that has the PDF, or drag the PDF into the message box again.
- **Anything else:** just ask Claude in plain words, for example "I'm stuck at step 5, what do I do?"
